

Jeanswest: CASE STUDY

Jeanswest Head Office reduce their energy costs and improve their lighting quality

Lighting levels have universally improved whilst the cost of running them has reduced by more than 60% resulting in an annual energy cost saving of approximately \$1,700.

We replaced 128 fluorescent tubes with advanced energy saving LED tubes which have a design life of more than 50,000 hours, so Jeanswest will not need to replace any tubes for a very long time.

“The new led lighting has not only made a complete difference in lighting but also to our power bill. I agreed to the upgrade on the basis it was completely free of charge to Jeans West and it was, there was no pressure to change anything or any costs incurred for the job. Their installer was very professional and helpful and did the job without any fuss what so ever. I was very happy with the job done by Energy Makeovers

Robert Tatt, National Store Fit-out Manager
