SUMMARY

AREA UPGRADED
COMMUNITY FACILITY

ANNUAL SAVINGS
\$2,000 P/A

CARBON ABATED
6.5 tonnes

WARRANTY SUPPLIED
5 YEARS

Filipino Christian Fellowship, based in Minchinbury NSW, are deeply concerned about the welfare of the planet. As part of their desire to decrease their carbon footprint, they engaged Energy Makeovers to discuss potential energy-efficiency opportunities—particularly those with State and/or Federal subsidies.

Energy Makeovers recommended the facility updates its inefficient electric storage water heater with a new state-of-the-art hot water heat pump.

CHALLENGE & SOLUTION

Energy Makeovers recommended a high quality, Midea integrated heat pump as the best fit solution for their needs.

Upgrading their hot water heat pump system will not only significantly reduce their carbon footprint but reduce their energy costs by over \$2,000 per year. These savings can be re-invested to further their charitable works within the local community.

An upgrade that benefits the Fellowship and the community!
