An LED upgrade for a local Catholic primary school

Resurrection's school motto; "We Care" couldn't ring anymore true than their recent decision to upgrade to LEDs. By making the switch to LED this local primary school in Kings Park have helped their community by reducing their energy consumption by almost 30,000 kwh a year.

This has helped reduce their carbon emissions and will provide a better quality of light for their bright, young students and hard-working staff.

The challenge and the solution

As to be expected with a school, Resurrection have a variety of buildings on the grounds with differing light installations. As well as classrooms and offices with fluorescent tubes Resurrection also wanted to upgrade their energy-guzzling sports floodlights.

Energy Makeovers completed the upgrade quickly and quietly and during the school holidays so the children and staff were not disrupted. Now Resurrection Primary School will benefit from energy savings and no maintenance for decades to come.

School upgraded **517 LEDs installed** **\$42,159** savings after 5 years

133 barrels of oil left in the ground

1,464 tree seedlings planted

9 homes powered

57 tonnes of greenhouse gases saved

21 cars off the road
