

Energy Makeovers case study: Energy Efficient Commercial Lighting

Reduce your lighting bills with Energy Makeovers

Since 2008, Energy Makeovers has been helping over 250,000 households and businesses save energy, time and money through the installation of energy saving equipment. With deep experience in partnering with businesses and governments to manage and deliver LED lighting upgrades, Energy Makeovers has developed processes to ensure that clients can enjoy a trusted relationship, top quality products and installations with minimum hassle. In addition, as part of a select few businesses operating in the Victorian Energy Saver Incentive scheme that are accredited for commercial lighting upgrades, Energy Makeovers is able to offer some lighting upgrades completely free of charge!

Case Study – more efficient, improved lighting for Ringwood Square Shopping Centre

Ringwood Square Shopping Centre partnered with Energy Makeovers to upgrade its older fluorescent lights to efficient LEDs under the VEET scheme's energy saving incentive.

Energy Makeovers upgraded hundreds of inefficient fluorescent tubes to PHILIPS LEDs which will save Ringwood Square over 50% off their lighting costs, will extend the life of their lights and improve the quality of light for their customers.

Thanks to the VEET scheme Energy Makeovers were able to provide this upgrade for free.

“Energy Makeovers helped us complete a lighting upgrade at Ringwood Shopping Centre. Not only do the lights look great, we’ll be able to see savings of over 50% and help reduce our carbon footprint. We were really pleased with the process and the end result, so a big thanks to the Team at Energy Makeovers.”
